

# Dual Purpose Automatic Chute Fire Closure Plate / manual closure plate

UK Manufactured & Installed Only By Hydrochute  
Furnace Tested to BS476: Parts 20 & 22

A bespoke, UK-manufactured auto-closing Fire Closure Plate (FCP) activated by a fusible link. In the event of a fire, upon reaching a temperature of 57 deg C. The fusible link will separate, releasing the gravity-operated plate to close the chute making the bin room a fire-tight compartment.

The chute can easily be manually operated to close the chute for the safe swapping of bins due to the Hydro Chute "spring free" design. The robust steel plate can withstand the repeated impact of falling debris in the closed position, ensuring it will always close.

The auto closing FCP has a third-party UKAS-accredited fire rating of 240 mins. The design also incorporates an intumescent seal to ensure nothing escapes. This FCP can be installed as an upgrade to existing chute systems.

***A 240 min fire-rated chute discharge pipe/chute extension is required when no fitting directly to the FCP directly to the ceiling slab. (Illustrated)***
